

The Equinox and the Enoch Calendar

How One Moment in the Heavens Begins the Scriptural Year

Introduction: The Anchor of Time

To truly understand the Enoch Solar Calendar, one must first understand the importance of the **Spring Equinox**.

The beginning of the year is **not determined by the moon**,
not by agricultural signs,
and not by human traditions.

It is determined by a **real, measurable event in the heavens**.

The equinox is not symbolic—it is **astronomical reality**.

Each year, the sun reaches a precise moment where it crosses the **Celestial Equator**. This moment is:

- Observable
- Predictable
- Universal

It can be witnessed anywhere on Earth—from Jerusalem to Cape Town to Florida.

Because of this, the early priests, prophets, and patriarchs were instructed to **watch the sun**, not the moon.

The Foundation of the Enoch Calendar

The Enoch Calendar is built entirely upon:

- The **path of the sun**
- The **movement along the horizon**
- The **heavenly signs described in Genesis 1:14 and Enoch 72**

This makes it:

Unchangeable, incorruptible, and independent of human adjustment

How the Year Begins (Step-by-Step)

1. Observe the Spring Equinox

The equinox is the moment when the sun crosses the celestial equator.

👉 This marks:

- The **end of the previous year**
 - The **completion of Day 364**
-

2. The Equinox Stands Alone

According to Enoch 82:

- The four seasonal turning points (Spring, Summer, Fall, Winter)
- Are **not counted within the weeks**

They are:

Transition points — not part of the weekly cycle

3. The Next Day Begins the Year

The day after the equinox becomes:

- Day 1 of Month 1
- Day 1 of the year
- Start of the weekly cycle

Everything resets at this moment:

- The year
 - The seasons
 - The Sabbath cycle
 - The appointed times
-

4. The Year Unfolds in Perfect Order

The structure is exact:

- 91 days per quarter

- 13 weeks per quarter
- 52 Sabbaths per year
- 364 total days

There are:

- No leap months
- No lunar corrections
- No human adjustments

👉 Only the sun governs the calendar.

Understanding the Equinox (Correctly)

Many today say:

“The equinox is when day and night are equal.”

This is not fully accurate.

Why?

1. **Atmospheric refraction**
 - Light bends, making sunrise appear earlier and sunset later
2. **Different latitudes**
 - Equal day/night does not occur on the same day everywhere
3. **Scriptural definition**
 - Enoch describes the moment when **day begins to increase**, not equality

👉 Therefore:

The true equinox is defined by the **position of the sun**, not daylight duration.

Ancient Proof in Stone

Across the world, ancient civilizations built structures aligned to the equinox:

- Solomon’s Temple
- Karnak (Egypt)
- Chichén Itzá (Maya)
- Göbekli Tepe (Turkey)
- Stonehenge (UK)
- Nabta Playa (Africa)

These structures:

- Align with sunrise at true east
- Use light and shadow to confirm the moment
- Function as **year-reset markers**

👉 This reveals a universal truth:

The heavens have always declared the appointed times.

Your Sundial Confirms This Today

The Besorah Seed equatorial sundial does the same work as these ancient structures.

It allows you to observe:

- Solar declination
- The north–south alignment
- Seasonal transitions
- The equinox moment itself

With it, you can physically verify:

- The movement of the sun
 - The change of seasons
 - The reset of the year
-

Teaching Example: The Crossing Point

A simple way to explain the equinox:

The equinox is the moment the sun crosses the Creator’s dividing line—the celestial equator.

At that moment:

- Day begins to overcome night
- A new cycle is about to begin

This is Heaven’s signal that:

The new year is ready to start

Scriptural Foundation

Genesis 1:14

“Let there be lights in the firmament... for signs, appointed times, days, and years.”

Enoch 72

Describes the movement of the sun and the increase of daylight.

 Together they confirm:

The calendar is:

- Not lunar
- Not agricultural
- Not man-made

It is:

Astronomical — written in the heavens

Frequently Asked Question

“How do the Sabbaths fit into the 364-day year?”

- 52 Sabbaths
- 52 weeks
- 7 days each

 $52 \times 7 = 364$

The weekly cycle is complete and unbroken.

Important Clarification

Sometimes people isolate part of the system (like 36 weeks = 252 days).

But this is only a portion of the full structure.

The complete design is:

- 364 total days

- 52 Sabbaths
- 4 seasonal markers
- 13 weeks per quarter

👉 The full system is balanced and complete.

◆ Final Conclusion

The Spring Equinox is not just an astronomical event.

It is the **anchor of the entire calendar**.

At that moment:

- The old year ends
 - The new year begins
 - The Sabbath cycle resets
 - The appointed times align
-

🔥 Closing Statement

The heavens have not changed.
Only mankind has.

The Enoch Solar Calendar calls us back to:

- The original design
- The Creator's order
- A calendar written in heaven
